

MULTILIGHT CASE

For safe transport and storage of the MULTILIGHT range

ORIGINAL
SCANGRIP
SINCE 1906

The sturdy and lightweight quality transport case is lined with protective foam, tailor-made to contain all the parts of the MULTILIGHT CONNECT range. In addition, there is also space for two batteries and two extra CONNECTORS.

This way, you always have the complete MULTILIGHT CONNECT programme at your fingertips, and at the same time the case provides full protection against shocks and other impacts during rough use at the worksite.

The case is delivered empty, and the contents can, of course be customised as required. When the case is not in use, it provides practical and space-saving storage of the MULTILIGHT range.
